## Question \#1: Science

10 points

| The only animals of this type native to the New | marsupials or |
| :--- | :--- |
| World are Ameridelphia [uh-MAIR-ih-DEL-fee-uh] | marsupialia |
| and the Monito del monte [moh-NEE-toh del |  |
| MAHN-tay]. One member of this order or subclass |  |
| of animals can only have 13 offspring survive for |  |
| any length of time after they are born together, |  |
| even though sometimes more are born. Those |  |
| animals are opossums. The largest carnivorous |  |
| animal in this group is the Tasmanian devil. When |  |
| these animals are born, they are very |  |
| underdeveloped, so they are more dependent on |  |
| their mothers than placental mammals. Most of |  |
| these animals live in New Guinea and Australia. |  |
| Name this type of mammal whose mothers have |  |
| pouches, including the kangaroo. |  |

## Question \#2: Literature

10 points

| One novel by this author is set during the same | Herman Melville |
| :--- | :--- |
| year as the Spithead and Nore mutinies, which this |  |
| author refers to as the "Great Mutiny". This author |  |
| set that novel on board the HMS Bellipotent, where |  |
| the title character is accused of mutiny by John |  |
| Claggart. Another novel by this writer is set on a |  |
| ship owned by Bildad and Peleg, who hire the |  |
| Polynesian harpooner Queequeg [KWEE-kweg], |  |
| who works for the first mate Starbuck. This author |  |
| started that novel with the sentence "Call me |  |
| Ishmael." Name this author of Billy Budd who |  |
| wrote about Captain Ahab in his novel Moby-Dick. |  |

Question \#3: Miscellaneous
10 points

One version of this practice spread to Europe after starting in Norfolk County, England. That practice led to the brother-in-law of Robert Walpole being nicknamed "Turnip Townshend". This process is helpful in getting rid of pests that are both immobile and require the presence of specific crops to stay alive. This practice has been used since ancient times, and it was improved during the Middle Ages by using legumes in the spring, going from a two-field system to a three-field system. The Norfolk system was an improvement to this practice that avoided leaving land fallow. Name this system of changing which crop grows on which land each year.
crop rotation or rotating crops

## Question \#4: Social Studies

10 points
Several people working in this job were killed in 1909 in Cherry, Illinois. A strike started by people with this job resulted in the Battle of Virden, and several victims are buried near Mary Harris "Mother" Jones. A labor leader of people with this job also started the United Steel Workers of America after creating the Congress of Industrial Organizations; that person was John L. Lewis. In recent decades, this job has been done by the mountaintop removal method, and there have been debates over whether this job can be done cleanly using pollution mitigation. Name this job in which a fossil fuel is taken from the ground.
coal miner or coal mining [prompt on partial answers; accept answers that specify a type of coal, such as anthracite or bituminous coal]

## Question \#5: Science

10 points

> This biome [BY-ohm] is generally the best source of caliche [kuh-LEE-chee], a calcium carbonate rock that is a good source of nitrate salts such as sodium nitrate. The smallest canid [KAY-nid], the fennec fox, lives in this biome. Some plants in this biome use CAM photosynthesis and have adaptations to minimize evaporation. In the United States, this biome is the natural habitat of Yucca brevifolia, which is commonly called a Joshua tree. Farmers in these biomes need to focus on irrigation, and their production is limited by the climate. Name these large areas with sparse vegetation and not much water.
deserts

Round 3<br>2nd Section<br>Teamwork Questions

## Question \#7: Social Studies

10 points per part

| In chapter 1 of the Book of Luke, this woman says <br> "I am the handmaid of the Lord. Let it be done <br> unto me according to your word." |  |  |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Name this mother of Jesus. | (Blessed Virgin) Mary or <br> Mariam |
| $\mathbf{2}$ | In the Book of Luke, this angel tells Mary that <br> she will become the mother of Jesus. | Gabriel or Jibril |
| $\mathbf{3}$ | This song, sometimes called the Canticle of <br> Mary, is based on words spoken by Mary in the <br> Book of Luke. | Magnificat |

## Question \#8: Social Studies

10 points per part

| Answer the following about religions that use <br> stars as symbols: |  |  |
| :---: | :--- | :--- |
| $\mathbf{1}$ | A star combined with this shape used to be a <br> symbol of the Ottoman Empire, and is now <br> used as a general Islamic symbol. A star with <br> this shape is on the flags of Turkey, Pakistan, <br> and other countries. | crescent (moon) [prompt <br> on $\underline{\text { moon }] ~}$ |
| $\mathbf{2}$ | Judaism can be symbolized by a six-pointed <br> star, which in the last few centuries has become <br> named for this Biblical king. | (Star of) David |
| $\mathbf{3}$ | This religion often uses nine-pointed stars <br> because it considers nine to be a symbol of <br> perfection and because this religion considers <br> itself the ninth in a line of religions. | $\underline{\text { Baha'ísm or Baha'í' faith }}$ |

Round 3<br>2nd Section<br>Teamwork Questions

## Question \#9: Fine Arts

10 points per part

| During the 19th century, some musical pieces were <br> classified as this type of piece even though they <br> did not fit the old definition, such as Hector <br> Berlioz's Roman Carnival. |  |  |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Name this type of music typically used to <br> introduce a larger work such as an opera. | overture(s) |
| $\mathbf{2}$ | In 1880, this composer wrote the Academic <br> Festival Overture and Tragic Overture. | Johannes Brahms |
| $\mathbf{3}$ | This composer based his Festive <br> Overture -which was written for an anniversary <br> of the October Revolution-on Mikhail <br> Glinka's Ruslan and Ludmilla [ROOS-lahn and <br> lood-MEE-luh]. | Dmitri (Dmitriyevich) <br> Shostakovich |

## Question \#10: Fine Arts

10 points per part

| This term refers to a form with an exposition, <br> development, and recapitulation. |  |  |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Give this term that also applies to music that is <br> performed by a solo instrument with or without <br> piano accompaniment, such as Ludwig van <br> Beethoven's piece nicknamed "Moonlight". | sonata [accept piano <br> sonata(s) or sonata form] |
| $\mathbf{2}$ | This composer wrote Sonatas and Interludes for <br> prepared piano during the 1940s. He later <br> wrote Four Minutes Thirty-Three Seconds, <br> which has no deliberate sounds. | John (Milton) Cage (Jr.) |
| $\mathbf{3}$ | This Russian composer wrote 10 sonatas for <br> piano, including his white and black masses. <br> When this composer died, Sergei Rachmaninoff <br> [rahk-MAH-nin-awff] toured Russia playing his <br> music. | Alexander Scriabin <br> [skree-AH-bin] |

Illinois Masonic Academic Bowl
2020 Sectional Tournament

Round 3<br>2nd Section<br>Teamwork Questions

## Question \#11: Literature

10 points per part

| Answer the following about fictional ships: |  |  |
| :---: | :--- | :--- |
| $\mathbf{1}$ | This novella by Joseph Conrad is set on the <br> Nellie on the Thames [temz]. In it, Marlow <br> describes finding Mr. Kurtz in Africa. | Heart of Darkness |
| $\mathbf{2}$ | Many of the characters in Jules Verne's [zhool <br> vairn'z] Twenty Thousand Leagues Under the <br> Sea leave the U.S. on this ship before they are <br> captured by Captain Nemo on the Nautilus. | USS Abraham Lincoln |
| $\mathbf{3}$ | In this novel, Major William Dobbin is very <br> sick when he boards the Ramchunder, but he <br> becomes popular on board when he recovers. | Vanity Fair |

## Question \#12: Literature

10 points per part

| Identify these fictional places: |  |  |  | Lilliput |
| :---: | :--- | :--- | :---: | :---: |
| $\mathbf{1}$ | This island and nearby Blefuscu <br> [BLEH-fuss-koo] are inhabited by little people <br> in Jonathan Swift's Gulliver's Travels. | Cain' |  |  |

## Question \#15: Social Studies

10 points
Magda Arnold linked this concept to action-tendencies, and her work was developed into appraisal theories of this concept by Richard Lazarus. Arousal and cognition are the two factors that cause this concept according to the Schacter and Singer Experiment. Paul Ekman related this concept to facial expressions. Psychologists have developed ways to measure awareness of this concept in oneself and others, which is called this concept's "intelligence". In the field of psychology, this concept refers to intense responses, which makes it different than a mood. Name this state of feeling, examples of which include scared, angry, and happy.
emotions [accept emotional]

## Question \#16: Literature

10 points
This character hears a voice that says "Sleep no
Macbeth more" after he has trouble saying the word "Amen". This character then says "To know my deed, 'twere best not know myself." This character says that life "is a tale told by an idiot, full of sound and fury, signifying nothing." Those words are spoken after this character's wife commits suicide. This character asks "Is this a dagger which I see before me?" shortly before he kills Duncan. This title character's future is predicted by three witches. Name this thane [rhymes with "main"] who becomes the king of Scotland in a play by Shakespeare.

$$

## Question \#17: Mathematics

10 points
These numbers are used as coefficients of a polynomial that approximates the fraction " $x$ over the quantity 1 minus $x$ minus $x$ squared" near $x$ equals 0 . The $n$-plus-first of these numbers times the $n$-minus-first differs by 1 from the square of the $n$th of these numbers, according to Cassini's identity. These numbers and Lucas [loo-kah] numbers follow the same recurrence relation. The limit of the ratio of successive pairs of these numbers is the golden ratio. These numbers were introduced in a book that used them to model the growth of rabbit populations. Name these numbers, each of which equals the sum of the previous two numbers, starting with $1,1,2,3,5,8$.

Fibonacci numbers or Fibonacci sequence

## Question \#18: Fine Arts

10 points
Francesco Morosini [fran-CHESS-koh moh-roh-ZEE-nee] is blamed for much of the destruction of this building because he ordered an attack when this building-which is not in Turkey - was storing gunpowder during the Great Turkish War in the 17th century. The British Museum contains several sculptures that were taken from this building in the early 19th century and are called the Elgin Marbles. Ictinos [IK-tuh-nohss] and Callicrates [kal-uh-KRAY-teez] worked on this building under the supervision of Phidias [FID-ee-uss], who designed a large gold and ivory statue of Athena that used to be inside this building. Name this former temple that is a major part of the Acropolis of Athens.

Parthenon [or
Parthenónas] [accept
Acropolis before "building" in the first sentence]

## Question \#19: Science

10 points
Sodium is combined with this element to make a molecule important in airbags, sodium azide [AYZ-"eyed"]. This element is combined with calcium carbide in the Frank-Caro process to produce calcium cyanamide ["cyan-um-eyed"]. This element combines with hydrogen to form amines [uh-MEENZ], which are a part of amino acids. An atom of this element is bound to three oxygen atoms by the Ostwald process, which is often used after an atom of this element is bound to three hydrogen atoms by the Haber process. This element is by far the most abundant element in the Earth's atmosphere. Name this element that combines with hydrogen to form ammonia.

## Question \#20: Social Studies

10 points
This leader forced Holland to agree to the Act of Seclusion, which prevented members of the House of Orange from holding the office of Stadtholder [SHTAHT-"holder"]. In battle, this person often served as second-in-command behind Thomas Fairfax; after Fairfax resigned, this person was successful at the Battle of Dunbar. This person was with the New Model Army that supported the Parliamentarians, who were commonly called Roundheads during the English Civil War. Name this person who became the Lord Protector of England after the beheading of King Charles I.

Oliver Cromwell

## Question \#25: Social Studies

10 points per part

| Minamoto Yoritomo was the first person to attain <br> this title. |  |  |  |
| :---: | :--- | :--- | :---: |
| $\mathbf{1}$ | Name these people who from 1192 to 1867 were <br> appointed by the emperor of Japan to oversee <br> the military. | shoguns [or bakufu or <br> sei-i taishogunshoku] |  |
| $\mathbf{2}$ | This family controlled the shogunate <br> ["SHOW-gun"-uht] from 1600 to 1868 until the <br> Meiji [MAY-jee] Restoration. | Tokugawa [toe-koo-GAU-wuh] <br> Ieyasu [ee-AY-uh-soo] |  |
| $\mathbf{3}$ | This rank was held by many people, including <br> Oda Nobunaga [noe-boo-NAH-guh] and <br> Toyotomi Hideyoshi [toy-uh-TOE-me <br> hee-day-YO-she], who were feudal lords. This <br> Japanese word refers to the land that these <br> people owned. | daimyos |  |

## Question \#26: Social Studies

| This series of meetings occurred in 1814 and 1815. |  | ( points per part |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Name these meetings at which the United <br> Kingdom was represented by Viscount <br> Castlereagh ["VIE-count CASTLE-ray"] and <br> the Duke of Wellington, while France was <br> represented by Talleyrand. | Congress of Vienna [or <br> Wiener Kongress or <br> Vienna Congress] |
| $\mathbf{2}$ | This Foreign Minister of the Austrian Empire <br> was the chair of the Congress of Vienna. | Klemens von Metternich <br> [MET-ur-nik] |
| $\mathbf{3}$ | At the Congress of Vienna, Sweden gained <br> control of Norway from Denmark, but lost this <br> territory to Prussia. | Swedish Pomerania [or <br> New Western Pomerania] |

Illinois Masonic Academic Bowl
2020 Sectional Tournament

Round 3<br>4th Section<br>Teamwork Questions

## Question \#27: Mathematics

10 points per part
This adjective describes a trapezoid with a line of symmetry that bisects its parallel sides.

| $\mathbf{1}$ | Give this adjective that also describes a triangle <br> with two congruent sides and two congruent <br> angles. | isosceles <br> ["eye"-SAH-suh-leez] |
| :---: | :--- | :--- |
| $\mathbf{2}$ | Find the measure, in degrees, of one of the base <br> angles of an isosceles triangle if the vertex angle <br> measures 30 degrees. | $\mathbf{7 5}$ degrees |
| $\mathbf{3}$ | Find the height of an isosceles trapezoid if its <br> bases measure 10 units and 6 units and the <br> other sides each measure 5 units. | square $\underline{\text { root of } \mathbf{2 1} \text { units }}$ <br> [accept <br> dadical 21 units; <br> do not prompt on "21"] |

## Question \#28: Mathematics

10 points per part
If two angles have this relationship, then the tangent of one angle equals the cotangent of the other angle.

| $\mathbf{1}$ | Name this relationship in which the measures of <br> two angles add to 90 degrees. | complementary angles <br> [or complements] |
| :---: | :--- | :--- |
| $\mathbf{2}$ | If an angle measures 32 degrees and 20 minutes, <br> find the measure of its complement in degrees <br> and minutes. | $\underline{\mathbf{5 7}}$ degrees and $\underline{\mathbf{4 0}}$ minutes <br> [if they don't specify <br> "degrees" and "minutes", <br> the order must be correct] |
| $\mathbf{3}$ | If the cosine of an angle is 0.6, find the cosine of <br> the complement of the angle. | $\mathbf{0 . 8}$ or $\underline{\mathbf{4 / 5}}$ |

Round 3<br>5th Section<br>Toss-up Questions

## Question \#29: Science

10 points

| A factor named for Henry Darcy and this force is | friction(al force) |
| :--- | :--- |
| used for water flowing through a pipe. The name of |  |
| this force also describes a loss that affects the |  |
| efficiency of pipes and engines. The existence of this |  |
| force leads to objects becoming electrically charged |  |
| in the triboelectric ["tribe-oh-electric"] effect. This |  |
| force can be greater when there is no motion, which |  |
| is the static version of it. This force can be |  |
| calculated by multiplying a coefficient denoted mu |  |
| times the normal force. Ice skating is possible |  |
| because this force is small between metal and |  |
| smooth ice. Name this force that opposes motion. |  |

## Question \#30: Literature

10 points
In this novel, a character in disguise states "I am an
The Count of Monte Cristo [or Le Comte de Monte-Cristo] That statement induces another character in this novel to describe the events that led to the character in disguise getting arrested at a marriage feast. The character in this novel who states what happened is Caderousse [kad-eh-rooss]. The protagonist of this novel seeks revenge against Fernand and Danglars after they cause him to spend time in solitary confinement. Name this novel about Edmond Dantès [dahn-tess], written by Alexandre Dumas [doo-mah].

Round 3<br>5th Section Toss-up Questions

## Question \#31: Mathematics

10 points
One of these entities is named for Gaspard Monge [mawnzh] and is defined by planes going through the midpoints of tetrahedron edges perpendicular to opposite edges. The first definition in Euclid's [YOO-klid'z] Elements is of this concept, calling it "that which has no part". Karl Wilhelm Feuerbach [FOY-ur-bahk] and Olry Terquem [ter-kem] discovered that nine of these entities related to a triangle can in turn be used to define a circle. Two of these structures define a line, and three of them define a plane if they are not co-linear. Name this geometric concept that has no length, area, or volume, and which can be a vertex of a polygon or the end of a segment.
points

## Question \#32: Social Studies

10 points
Sarah Hopkins Bradford interviewed, befriended, and wrote two books about this person. This person assisted James Montgomery during the raid on Combahee [kum-BEE] Ferry during the Civil War. John Brown often referred to this person, who helped him with recruiting, as a "general". This person claimed to think "I had crossed the line of which I had so long been dreaming" when she entered Philadelphia, and her fame was due to her many trips between Philadelphia and Maryland. This person often sang "Go Down Moses", and in fact she was sometimes called "Moses". Name this woman who helped the Underground Railroad.

Harriet Tubman [or Araminta Ross]

Illinois Masonic Academic Bowl
2020 Sectional Tournament

Round 3<br>Extra Section Toss-up Questions

## Extra Question \#1: Science

10 points
One of the stars in this constellation is orbited by Gemini the exoplanet Thestias [THESS-tee-uss]. Another bright star in this constellation is actually three binaries for a total of six stars. This constellation is between Auriga [aw-"RYE"-guh] and Canis [KAY-nis] Minor, and it is close to Orion's Betelgeuse [BAY-tul-"juice"]. This constellation is located by going through the opening of the ' V ' shape in Taurus or by going perpendicular to Orion's belt. This constellation is also near Cancer, and its two bright stars are near each other. Name this constellation whose two brightest stars represent heads and are called Castor and Pollux.

## Extra Question \#2: Literature

10 points

| One character in this novel sings a song he made up | The Wind in the |
| :--- | :--- |
| called "Ducks' Ditty" that the ducks do not like. | Willows |
| That character and another then travel along a |  |
| river to another character, and they take some |  |
| horses out to go camping. That occurs in "The |  |
| Open Road", an episode in this novel that takes |  |
| place before the characters visit Badger, who is |  |
| about to go to bed. Though this novel was not |  |
| written by A. A. Milne, he adapted it for the stage |  |
| as Toad of Toad Hall. Name this children's novel |  |
| about Rat and Mole, written by Kenneth Grahame. |  |

2020 Sectional Tournament

Round 3<br>Extra Section<br>Toss-up Questions

## Extra Question \#3: Social Studies

10 points
A person from this island helped Orontobates [oh-RAHN-toh-BAH-teez] and used catapults to slow down Alexander the Great during the Siege of Halicarnassus [HAL-ih-kar-NASS-uss]. That person, who also assisted Artabazos [ar-TAH-buh-zose] II, was Memnon. Before establishing a base in Malta and after moving to Cyprus, the Knights Hospitaller [HAHSS-pit-uh-lur] took control of this island. Demetrius I of Macedon attempted a siege on this island in 305 BCE , and this island's residents used the metal from the siege tower to build a statue. In 226 BCE , a major earthquake on this island destroyed its enormous statue. Name this island that housed a giant statue of Helios called the Colossus.

## Rhodes

## Extra Question \#4: Fine Arts

10 points

| A 1964 composition named for being in this key | C major |
| :--- | :--- |
| was a very early example of musicians playing loops |  |
| and was written by Terry Riley. Though it briefly |  |
| enters E major, Maurice Ravel's [ruh-vel'z] Bolero |  |
| is primarily in this key. Franz Schubert's two |  |
| symphonies in this key are nicknamed "Little" and |  |
| "Great" to distinguish them. The key signature for |  |
| this key is the same as the key signature for A |  |
| minor. Introductory piano pieces are often written |  |
| in this key because it is the only major key that |  |
| uses only white keys. Name this key signature with |  |
| no sharps or flats. |  |

Illinois Masonic Academic Bowl<br>2020 Sectional Tournament

Round 3<br>Extra Section Toss-up Questions

## Extra Question \#5: Mathematics

10 points

There are different ways to define the demi•regular type of this structure, while the semi•regular type is defined similarly to Archimedean [ark-ih-MEE-dee-un] solids, meaning there are identical vertices [VER-tuh-sees] but not all identical polygons. Like polyhedra [pah-lee-HEE-druh], these geometric arrangements can be described by a Schläfli [SHLAH-flee] symbol. An a.periodic example of this kind of structure, using kites and darts, was developed by Roger Penrose. There are three regular types of these arrangements, using triangles, squares, and hexagons respectively. In these arrangements, there are no overlaps or gaps between shapes. Give this term for shapes covering a plane surface.
tessellation(s) [accept plane tilings; accept tessellated]

## Extra Question \#7: Social Studies

10 points per part

| Identify these people who represented Tennessee <br> in the U.S. Senate: |  |  |
| :---: | :--- | :--- |
| $\mathbf{1}$ | This person was a senator both before and after <br> being president. He became president when <br> Abraham Lincoln was assassinated. | Andrew Johnson |
| $\mathbf{2}$ | This senator-whose father was also a senator <br> from Tennessee-stepped down to be Bill <br> Clinton's vice president, then failed to carry <br> Tennessee when he ran for president in 2000. | Al(bert Arnold) Gore <br> (Jr.) |
| $\mathbf{3}$ | This senator became the longest-serving <br> secretary of state in U.S. history. He received a <br> Nobel Peace Prize for his role in drafting the <br> United Nations Charter. | Cordell Hull |

Illinois Masonic Academic Bowl<br>2020 Sectional Tournament

Round 3<br>Teamwork Questions

## Extra Question \#8: Science

10 points per part

| For a heat engine, the change in this quantity <br> equals the difference between the heat input and <br> the work done by the engine. |  | $\begin{array}{\|c\|l\|}\hline \mathbf{1} & \begin{array}{l}\text { Name this quantity equal to internal energy } \\ \text { plus the product of pressure times volume. }\end{array}\end{array}$ enthalpy [prompt on $\left.\underline{\boldsymbol{H}}\right]$ |  |
| :---: | :--- | :--- | :---: |
| $\mathbf{2}$ | This law states that the enthalpy change during <br> a reaction does not depend on the steps in the <br> reaction. | Hess's law (of constant <br> heat summation) |  |
| $\mathbf{3}$ | This "cycle" uses Hess's law to find the lattice <br> energies of ionic crystals. | Born-Haber cycle |  |

## Extra Question \#9: Science

10 points per part

| The dynamic type of this quantity can be <br> measured in poise [pwahss], while the kinematic <br> [ky-nuh-MAT-ik] type can be measured in stokes. |  |  |
| :---: | :--- | :--- |
| $\mathbf{1}$ | Name this resistance of a fluid to flow. | viscosity [or viscousness] |
| $\mathbf{2}$ | To find the kinematic viscosity, the dynamic <br> viscosity is divided by this quantity. | density |
| $\mathbf{3}$ | This adjective describes fluid flow without <br> viscosity, which theoretically happens with ideal <br> fluids and actually happens with superfluids. | inviscid [in-VISS-id] flow |
